Records Management Software for Airlines, Lessors and MROs

STREAM (Secure Technical Records for Electronic Asset Management) is the World's No.1 records management platform for airlines, lessors and MROs.

STREAM Benefits:

- Remote access available to all technical records on demand
- All users work to the same standard and all documents are centrally available
- Interactive transition management supports online collaboration with stakeholders (lessors)
- Seamless integration with MRO IT systems
- Records can be shared with potential clients without incurring travel or support costs

ISO 9001 Approved Services:

Records scanning, imaging and indexing services delivers a total solution to the aviation industry.

Global and local coverage:

Our services are delivered from our UK-based bureau or through our network of global scanning partners.

Customer Testimonial

“Emirates’ continued growth in Aircraft and Engine Fleet required an industry leading solution to enable them and their business customers to access Aircraft and Engine Maintenance Records effectively and efficiently for subsequent review and recording processes.

STREAM provided a solution that integrated both Operational Data and Aircraft Transition processes into a seamless Asset Lifecycle activity. This has put the access of digital documentation, compliance data review, validation and delivery right into the hands of those that need it, when they need it.

Through close collaboration with AerData, Emirates Engineering now provides the most up-to-date Digital Records from Asset delivery to departure for local and global customers, thus enabling continued Asset Value and Customer Satisfaction.”
